PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building and shipping features for a large enterprise web application using React.js, ColdFusion, SQL and REST APIs. Built AI-powered features including a RAG-based chatbot, AI course generation and a prompt-driven form builder, integrating OpenAI, Anthropic and AWS services. AI adoption lead for a team of 5, with experience in developer automation, API tooling and working directly with client stakeholders.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, CFML, Bash

Frontend: React.js, TanStack Start, HTML5, CSS3, Tailwind CSS, Responsive Design

Backend & APIs: ColdFusion, REST APIs, Swagger / OpenAPI, Convex

Cloud & DevOps: Git (worktrees), GitHub, GitHub Actions (CI/CD), AWS S3, Amazon Polly, Bash

AI Integration: OpenAI and Anthropic APIs, RAG, Pinecone (vector search), Server-Sent Events

Tools: Postman, Herdr, Claude Code, Cursor, GitHub Copilot, Codex

PROFESSIONAL EXPERIENCE

Techversant Infotech | Jan 2024 – Present

Associate Software Engineer – Full Stack Developer

Project: BIS – enterprise application for a Canadian client (50+ member Agile team)

- Worked across multiple modules of the application, including online course management, equipment management, digital forms, task management and the mobile API backend, using React.js, ColdFusion and SQL.
- Built auto-generated Swagger API documentation that updates itself on every push, in Staging and Pre-production (testing) and Production (live), with 200+ endpoints on Staging. This removed manual documentation updates for developers.
- Built an in-browser API testing page on top of the documentation, with login, automatic token refresh and a server-side proxy for cross-origin requests.
- Work directly with client stakeholders, including the CTO, on requirements, sprint reviews and technical discussions.
- Built developer tools that removed repetitive daily steps (WSL and ColdFusion auto-start, a backend file watcher, Bash shortcuts) and scripts to clean unused language labels and redundant database entries.
- Worked on three AI features of the application: a RAG-based support chatbot with streamed answers and live-agent handoff, an AI course builder that generates outlines, slides and quizzes with Amazon Polly narration, and an AI form builder that generates forms from prompts and documents.
- One of the AI adoption leads for the project: guided and monitored a team of 5 developers in using AI tools, and reported progress to the client in weekly meetings.
- Created custom AI skills for planning, code review and daily status reporting that the AI adoption team uses to work faster. Run several tasks in parallel across Git worktrees using Herdr and AI coding tools.
- Integrated AWS S3 for file handling into application modules; tested APIs with Postman.

PROJECTS

Modular Wedding Invitation Platform | TanStack Start, React 19, TypeScript, Convex, Tailwind CSS

- Built a digital wedding invitation platform where each couple turns optional sections on or off (love story, live stream, guestbook) and picks from four visual themes.
- Designed a multi-tenant data model (sites, sections, events, RSVPs, wishes) on Convex, with real-time RSVP collection, a moderated guestbook, a live countdown, calendar (.ics) export and map directions.
- Used cursor-based pagination for guest-facing lists, and CSS variables with Tailwind tokens to run four themes from a single component tree.

EDUCATION

Master of Computer Applications (MCA) | 2021 – 2023
Mohandas College of Engineering and Technology, Trivandrum (APJ Abdul Kalam Technological University)

Bachelor of Computer Applications (BCA) | 2018 – 2021
NSS College Rajakumari, Idukki (Mahatma Gandhi University)
